KIA ORA KOUTOU.

It is my pleasure and privilege to welcome you to our 2024 Final Year Project Display Day.

The Final Year Project represents a significant milestone in our Bachelor of Engineering degree. These year-long research projects draw upon the knowledge and expertise that the students have attained during their degree, applied to solve real-world problems. The Final Year Project Display Day is always an exciting time to see engineering theory come to life.

The projects provide an important opportunity for students to realise their capacity and build confidence in their skills as independent learners. We put a strong emphasis on getting our students career-ready once they graduate, so it is great to see the range of industry sponsors who continue to get involved with the projects each year.

I hope you will join us in proudly celebrating everything that our students have achieved this year.

ASSOCIATE PROFESSOR RICHARD CLARKE

ABOUT

the Final Year Project

The Final Year Project, formerly recognised as the Part IV Research Project, is a compulsory unit of our Bachelor of Engineering (Honours) degree. This involves final year Engineering students spending the bulk of the year — usually in pairs — on a research project supervised by engineering academics. This degree component requires the submission of a research portfolio that includes a final report, a conference presentation, and technical demonstrations. In essence, it assesses a student's ability to utilise their knowledge of both theory and practice.

A variety of topics will be showcased by each department, and in some cases, a student's project may entail solving a real problem proposed by an engineering company. Because these projects are considered as learning experiences to encourage students to tackle problems the same way engineers do in their professional career, we encourage as much industry participation as possible.

We ensure that this is the case by inviting industry professionals each year, not just as sponsors and co-supervisors, but also to review and judge the projects. Prizes are also awarded to outstanding projects of each department.

The practical demo and display/exhibition component of the Final Year Project is what you will be seeing today.

Engineering departments featured at today's event in the order of floor level:

- Civil and Environmental Engineering
- Mechanical and Mechatronics Engineering
- Chemical and Materials Engineering
- Engineering Science and Biomedical Engineering
- Electrical, Computer, and Software Engineering
